PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience building scalable, high-traffic web applications for enterprise clients across banking, restaurant technology, and travel/cruise industries. Experienced in React.js, Next.js, TypeScript, JavaScript, Node.js, micro-frontends, REST APIs, GraphQL, and cloud-ready application architecture. Migrated a core banking application to a micro-frontend architecture, delivered multi-tenant fulfillment services supporting three restaurant brands from a shared codebase, and improved user engagement by 30% and Lighthouse performance by 25% through targeted optimization. Currently focused on AI-enabled engineering workflows, developer productivity, system design, and building scalable, secure, and maintainable applications.

TECHNICAL SKILLS

AI: OpenAI, LangChain, LangGraph, MCP, Agent Evals, Claude Code, Cursor

Frontend: React, Next.js, Redux, TypeScript, JavaScript, HTML5, CSS, Webpack, D3.js

Backend: Node.js, Express, Python, FastAPI, GraphQL, Kafka, RabbitMQ, MongoDB, PostgreSQL

DevOps & Cloud: AWS, Cloudflare, Docker, Kubernetes, Nginx, Jenkins, CI/CD Pipelines, Git

Quality & Monitoring: Jest, React Testing Library, New Relic, Google Analytics, Core Web Vitals

Content Platforms: Adobe Experience Manager (AEM), Contentful CMS

PROFESSIONAL EXPERIENCE

Senior Experience Engineer | Publicis Sapient **Feb 2025 – Present**

Remote | Full-time

- Architected and delivered a **scalable Next.js booking platform for Carnival**, decomposing the experience into a **micro-frontend system** built on **Atomic Design principles** so squads ship modular, independently deployable journeys without cross-team release coordination.
- Integrated **AEM and GraphQL into the frontend architecture**, powering dynamic content delivery and enterprise data integration across the full booking funnel.
- Built reusable **AI-enabled engineering workflows** that let developers **apply AI consistently** across the platform while preserving code quality, security standards and architectural integrity.
- Owned **technical onboarding for all new engineers**, authoring structured learning paths across platform architecture, TypeScript conventions, design patterns and delivery workflows **significantly reducing time to first production commit**.

Senior Software Engineer | Inspire Brands **May 2024 – Feb 2025**

Hyderabad | Full-time

- Engineered **multi-tenant** fulfilment and location services powering **Buffalo Wild Wings, Sonic and Arby's** thousands of monthly active users across **3 brands from one shared React and Next.js codebase**.
- Architected a **Node.js/Express BFF layer** that consolidated downstream API calls into tenant-specific responses, cutting client-side network overhead and eliminating sensitive fields from browser-exposed payloads.
- Led modernization of the fulfilment and location journeys, producing a **30% increase in user engagement time** and measurably higher customer satisfaction through faster page loads and optimized user flows.
- Integrated **Contentful CMS** for multi-brand content orchestration, enabling marketing to ship campaigns **without engineering deploys** and sharply reducing content lead time.
- Instrumented **New Relic and Google Analytics** across Core Web Vitals and conversion funnels, identifying and resolving performance regressions before they reached customers.

Analyst – Frontend Engineering | DBS Bank **Nov 2022 – May 2024**

Hyderabad | Full-time

- Implemented **micro-frontend architecture** in React, modularizing a monolithic banking application into independently deployable units and unblocking **parallel development across teams**.
- Improved **Lighthouse score by 25%** through code optimization, continuous performance monitoring and efficient resource management, with components tuned for consistent cross-browser performance.
- Built **role-based navigation and conditional rendering** for admin, financial-analyst, customer-support and end-user personas using React, Redux Toolkit and Context API, keeping each experience secure and scoped to entitlements.
- Drove frontend modernization and framework upgrades, retiring critical **legacy technical debt** and establishing **modular coding patterns** adopted across modules.
- Automated deployment of frontend applications through **Jenkins and EVOLVE (cloud orchestration on AWS)**, with Jest and React Testing Library coverage gating releases.
- Applied **secure coding practices** to mitigate vulnerabilities and meet banking security and compliance policy, developing deep working knowledge of **fintech workflows** and regulated delivery.

Associate Software Engineer | Accenture **Aug 2020 – Nov 2022**

Bengaluru | Full-time

- Developed the user interface for the **myWizard DevOps platform** in **React.js**, translating design specifications into production-quality responsive interfaces.
- Led design and development of a scalable **React component library adopted across 4 platform modules**, driving UI/UX standardization, removing duplicate implementations across engineering teams and improving development velocity.
- Received the **Accenture Wall of Fame Award (2021)** for delivery impact on the DevOps platform within the first year of joining.

PROJECTS

AI-Powered Portfolio with RAG Chatbot | Next.js, LangChain, Hybrid RAG

- Built a responsive, SEO-optimized portfolio using Next.js (App Router), React and TypeScript with SSR/SSG for fast page loads and strong Core Web Vitals.
- Integrated a RAG-based conversational AI assistant using LangChain, vector embeddings and semantic search that answers recruiter questions about my experience, projects and skills in real time.

Expense Tracker | LangGraph, RAG, LLM Evals

- Architected a full-stack expense tracker with agentic AI workflows built on LangGraph, including automated transaction categorization, receipt parsing, budget insights and natural-language financial queries.
- Designed a RAG pipeline over user transaction data using hybrid search, tool calling and structured outputs to deliver accurate, context-aware spending insights.
- Built an LLM evaluation framework with LangSmith and RAGAS to measure faithfulness, answer relevancy, context precision and categorization accuracy, with automated eval regression checks in the CI/CD pipeline.
- Developed a scalable backend with secure REST APIs, JWT authentication, PII redaction, PostgreSQL with pgvector, Redis caching and Docker-based deployment.

EDUCATION

B.Tech, Electronics and Telecommunication Engineering | KIIT University, Bhubaneswar **May 2020**
